

COMPUTER

- An I/O processor controls the flow of information between
 - cache memory and I/O devices
 - main memory and I/O devices
 - two I/O devices
 - cache and main memories
- Which of the following devices will take highest time in taking the backup of the data from a computer?
 - Magnetic disk
 - Pen drive
 - CD
 - Magnetic tape
- ROM is a kind of
 - primary memory
 - cache memory
 - removable memory
 - secondary memory
- The errors that can be pointed out by compilers are
 - Syntax errors
 - Semantic errors
 - Logical errors
 - Internal errors
- Let $x = 11111010$ and $y = 00001010$ be two 8-bit 2's complement numbers. Their product in 2's complement notation is
 - 11000100
 - 10011100
 - 10100101
 - 11010101
- The range of numbers that can be stored in 8 bits, if negative numbers are stored in 2's complement form is
 - 128 to +128
 - 127 to +128
 - 128 to +127
 - 127 to +127
- Primary storage is ... as compared to secondary memory.
 - slow and expensive
 - fast and inexpensive
 - fast and expensive
 - slow and inexpensive
- Which of the following units is used to supervise each instruction in the CPU?
 - Control unit
 - Accumulator
 - ALU
 - Control Register
- $(2FAOC)_{16}$ is equivalent to
 - $(195084)_{10}$
 - $(00101111101000001100)_2$
 - Both (a) and (b)
 - None of the above
- The decimal equivalent of octal number 111010 is
 - 81
 - 72
 - 71
 - 61

ANSWER

1.	B	2.	D	3.	D	4.	A	5.	A
6.	B	7.	C	8.	A	9.	C	10.	B

SOLUTION

- (b)**
An I/O processor controls the flow of information between main memory and I/O devices.
- (d)**
Magnetic tape will take highest time in taking the backup of the data from a computer.
- (d)**
ROM is a kind of secondary memory.
- (a)**
The errors that can be pointed out by compilers are syntax errors.
- (a)**
- (b)**
Required range is -128 to +127.
- (c)**
Primary storage is fast and expensive as compared to secondary memory.
- (a)**
Control unit is used to supervise each instruction in the CPU.
- (c)**
From option (b),
 Binary from $\begin{array}{ccccc} 0010 & 1111 & 1010 & 0000 & 1100 \\ \hline & 2 & F & A & 0 & C \end{array}$
 Hexadecimal
 So $(2FAOC)_{16} = (00101111101000001100)_2$
 From option (a).
 $(195084)_{10} = (2FAOC)_{16}$
- (b)**
 $\begin{array}{cc} (111 & 010)_2 \rightarrow \text{Binary} \\ \boxed{7} & \boxed{2} \rightarrow \text{Octal.} \end{array}$
